SUMMARY

Computer Science graduate with hands-on experience in software development, backend engineering, cloud automation, and full-stack application development. Proficient in Python, Django, JavaScript, React, PostgreSQL, AWS, Docker, and Kubernetes, with experience building scalable applications and automating cloud infrastructure. AWS Certified Developer – Associate, Pega Certified System Architect, and Claude Developer Certified. Seeking a Software Engineer role to build reliable, scalable, and maintainable software solutions.

EDUCATION

B.Tech in Computer Science and Engineering, Aditya University
Surampalem, Andhra Pradesh
CGPA: 8.33 / 10

Nov 2022 – May 2026

TECHNICAL SKILLS

Languages: Python, C++, Java, C

Web & Backend: HTML, CSS, JavaScript, TypeScript, React, Node.js, Express.js, Django, Django REST Framework

Messaging & Distributed Systems: RabbitMQ, Celery, Apache Kafka

Databases & Caching: SQL, MongoDB, Redis

Cloud & Deployment: AWS, Docker, Kubernetes

AI: Claude AI

Platforms & Tools: Pega Constellation, GitHub, Postman

EXPERIENCE

Pega Intern -Certificate

Jan 2025 – June 2025

Arteans, Remote

- Developed a Hospital Appointment Booking System using Pega to manage end-to-end appointment workflows.
- Streamlined patient booking and approval processes using App Studio and Dev Studio automation.
- Designed scalable data models and UI components to improve patient–doctor interaction.

AWS Development Intern -Certificate

June 2024 – Aug 2024

Technical Hub, Kakinada

- Automated EC2 instance lifecycle operations (start, stop, reboot, terminate) using Python and Boto3.
- Implemented AWS Lambda functions with EventBridge triggers for scheduled automation and backup tasks.
- Deployed static websites on AWS S3 and EC2 and secured resources using IAM roles and policies.

PROJECTS

Twitter Clone — Django + PostgreSQL - Live Demo

Aug 2026

- Built a Twitter-like social media application using Django and PostgreSQL, implementing authentication, user profiles, personalized feeds, and social interactions.
- Implemented tweet CRUD operations, follow/unfollow, likes, comments, and user search with relational data modeling.
- Used Django ORM to model relationships between users, tweets, likes, comments, and followers, simplifying database operations.
- Added premium user functionality with verified badges and deployed the application with PostgreSQL on Render.

SmartCourier Management System — Pega 24.2 - GitHub

Jul 2025 – Aug 2025

- Developed an end-to-end courier management workflow using Pega 24.2 Constellation, covering order placement, payment, pickup, delivery, cancellation, and returns.
- Implemented business rules to route shipments above 1 kg to managers for approval or rejection and automated email notifications across key workflow stages.

- Designed a Decision Table to calculate courier charges based on vendor, weight range, and delivery type, with Data Pages for data retrieval and validation.

Automated EC2 Lifecycle and Snapshot Management — AWS - [GitHub](#)

Jun 2024 – Aug 2024

- Automated EC2 instance lifecycle operations using AWS Lambda, Python, and Boto3, reducing manual infrastructure management.
- Configured Amazon EventBridge for scheduled instance operations and automated EBS snapshots every 6 hours.
- Implemented IAM roles and policies for secure resource access and automated snapshot tagging and CloudWatch logging.

Fitness Recommendation System - [GitHub](#)

Aug 2024 – Sep 2024

- Developed a full-stack fitness application with authentication, responsive dashboards, and personalized diet and workout recommendations based on BMI and user goals.
- Integrated the Google Gemini API to provide an interactive AI-powered fitness chatbot.
